About FPT

Globally trusted partner.
Let's discover more about us.

Artificial intelligence (AI) is the simulation of human intelligence processes by machines, especially computer systems. These processes include learning (the acquisition of information and rules for using the information), reasoning (using rules to reach approximate or definite conclusions) and self-correction.

Hello and welcome to English 4 CS! (Azt00)

- In this course, you will learn to understand, speak, and write the words required to function in an English speaking IT job or University study program.

The course is organized into many units covering a wide area of IT topics. To complete a unit, you need to learn the new vocabulary and then complete the activities.

Azt00 – 00 - Vocabulary

- app(application)
- Component
- Computer
- Data
- Database
- Hardware
- Internet
- Network
- Peripheral
- software

- In this first unit, there are only 10 vocabulary words you need to learn. The vocabulary words are normally presented in a short reading or dialogue format. Here is a really short reading as an example:

Azt00 : Text 00

- "Good afternoon students! Today I want to talk about application development. As you know, to begin you need a good computer with solid components. Having the right hardware will help you to develop quality software that works without crashing.

- I always follow certain rules when I build a new app:
 - 1. The data for the application should be stored in a relational database
 - 2. Customers should be able to buy my application on the Internet
 - 3. The software should work without any extra peripherals
 - 4. The program should be designed to work with or without a solid network connection.

- By following these simple rules, you can write great applications that work for everyone.

Azt00 : Text00

- End

- 'computer'
 - 0 - literally meaning 'that which is given', this term refers to raw information of any kind
 - 1 - an organized, electronic collection of information optimized for fast access and typically consisting of rows, columns, indexes, and keys
 - 2 - an electronic, digital device that stores and processes information

Azt00 : Activity 00

- **'component'**
 - 0 - any device internal to the computer, such as a primary hard disk drive or motherboard
 - 1 - any program designed to run on a computer
 - 2 - an external computer add-on, such as a printer or a scanner; also known as an 'accessory'

- 'database'
 - 0 - a software program which allows a user to perform specific tasks such as word processing, email, accounting, database management
 - 1 - physical things that make up a computer, such as a component or a peripheral
 - 2 - an organized, electronic collection of information optimized for fast access and typically consisting of rows, columns, indexes, and keys

- **'peripheral'**
 - 0 - any program designed to run on a computer
 - 1 - an organized, electronic collection of information optimized for fast access and typically consisting of rows, columns, indexes, and keys
 - 2 - an external computer add-on, such as a printer or a scanner; also known as an 'accessory'

- 'hardware'
 - 0 - an electronic, digital device that stores and processes information
 - 1- an organized, electronic collection of information optimized for fast access and typically consisting of rows, columns, indexes, and keys
 - 2 - physical things that make up a computer, such as a component or a peripheral

- 'software'
 - 0 - an electronic, digital device that stores and processes information
 - 1- any program designed to run on a computer
 - 2 - physical things that make up a computer, such as a component or a peripheral

- '**app**' or '**application**'
 - 0 - literally meaning 'that which is given', this term refers to raw information of any kind
 - 1 - software program which allows a user to perform specific tasks such as word processing, email, accounting, database management
 - 2 - physical things that make up a computer, such as a component or a peripheral

- **'Internet'**

- 0 - physical things that make up a computer, such as a component or a peripheral
- 1 - an electronic, digital device that stores and processes information
- 2 - the largest known public network in the world, connecting millions of computers around the world

- 'data'
 - 0 - physical things that make up a computer, such as a component or a peripheral
 - 1 - literally meaning 'that which is given', this term refers to raw information of any kind
 - 2 - an external computer add-on, such as a printer or a scanner; also known as an 'accessory'

- **'network'**
 - 0 - literally meaning 'that which is given', this term refers to raw information of any kind
 - 1 - a software program which allows a user to perform specific tasks such as word processing, email, accounting, database management
 - 2 - a group of connected computers which share resources

End of Lesson 0

- Uuuuuuurrrrrrraaaaaa!!!!
